Research Interests

My research aims to enable sustainable aerospace propulsion through multiscale reacting flow modeling that integrates *ab initio* molecular simulation, chemical kinetic modeling, and turbulence-resolved flow simulations, with the aid of data-driven methods. Specifically, I am interested in sustainable aviation fuel combustion modeling and design pathways, and the underlying reacting flow physics in both current propulsion devices and future carbon-neutral, high-speed vehicles.

Professional Appointments

Assistant Professor, University of Southern California, Los Angeles, CA, USA — Starting 2025
Department of Aerospace and Mechanical Engineering

Postdoc, Stanford University & SLAC National Lab, Stanford, CA, USA — 2020 – 2024
Department of Chemistry and the PULSE Institute — *Advisor: Todd J. Martínez*

Postdoc, Stanford University, Stanford, CA, USA — 2019 – 2020
Department of Mechanical Engineering — *Advisor: Hai Wang*

Education

Stanford University, Stanford, CA, USA — 2014 – 2019
Ph.D., Mechanical Engineering — *Advisor: Hai Wang*
Thesis: HyChem – A physics-based approach to modeling real-fuel combustion chemistry [*Link*]

Northwestern University, Evanston, IL, USA — 2012 – 2014
M.S., Mechanical Engineering — *Advisor: Jian Cao*

Shanghai Jiao Tong University, Shanghai, China — 2008 – 2012
B.S., Mechanical Engineering

Research Experience

Postdoctoral Scholar, Stanford University, Stanford, CA, USA — 2020 – 2024
Department of Chemistry and the PULSE Institute — *Advisor: Todd J. Martínez*

- Research direction 1: Quantum chemistry reaction discovery for reacting flows
  - Combining *ab initio* molecular dynamics with chemical kinetic modeling in the *ab initio* nanoreactor for fuel combustion, sustainable aviation fuel design, and emission prediction
  - Developing enhanced sampling approaches for efficient computational reaction discovery
  - Exploring nonequilibrium thermodynamics and plasma chemistry in the *ab initio* nanoreactor
- Research direction 2: Multiscale modeling for energy harvesting materials
  - Modeling photo- and mechanical-energy harvesting materials at multiscales
  - Exploring chemistry and mechanics interaction in stress-responsive materials.

- Modeling photoinduced electrocyclic ring-opening using nonadiabatic molecular dynamics

Postdoctoral Scholar, Stanford University, Stanford, CA, USA 2019 – 2020
Department of Mechanical Engineering *Advisor: Hai Wang*

- Research direction 1: Bridging reduced kinetic models with 3D turbulent modeling
  - Developed an ultra-reduced methane combustion kinetic model for high-speed turbulent combustion modeling, including direct numerical simulation (DNS), large-eddy simulation (LES), and one-dimensional turbulence (ODT) modeling
- Research direction 2: Energy materials study using density functional theory (DFT)
  - DFT study of sodium-sulfur battery electrochemistry in collaboration with experimentalists
  - Computational study of interactions between polycyclic aromatic hydrocarbons and metal ions

Graduate Research Assistant, Stanford University, Stanford, CA, USA 2014 – 2019
Department of Mechanical Engineering *Advisor: Hai Wang*

- Research direction: Physics-based combustion chemistry model for liquid propulsion fuel
  - Developed and implemented a hybrid chemistry (HyChem) approach for combustion chemistry modeling of liquid propulsion and ground transportation fuels, including conventional jet fuels, sustainable aviation fuel, rocket propellants, and gasolines
  - Extended the HyChem approach emission modelings such as NO_x and soot (particulate matters)
  - Applied HyChem combustion chemistry models to LES under real engine operating conditions

Honors and Awards

Wiley Computers in Chemistry Outstanding Postdoc Award, ACS Spring 2024 2024
AFOSR Scholar Award, ACTC (American Conference on Theoretical Chemistry) 2022 2022
Combustion Institute Student Travel Award, 11th U.S. National Meeting on Combustion 2019
NSF Student Award, 37th International Symposium on Combustion 2018
Combustion Institute Student Travel Award, 10th U.S. National Meeting on Combustion 2017
Graduation with highest distinction (Rank 1/87), Shanghai Jiao Tong University 2012
National Scholarship, China Ministry of Education & Shanghai Jiao Tong University 2009

Invited Talks and Conference Presentations

30. **Invited:** Application of the *ab initio* nanoreactor and the nonadiabatic *ab initio* molecular dynamics to photodegradation, *BASF CARA 10th Anniversary and Spring Review Meeting*, Berkeley, CA, April, 2024.

29. Advancing aerospace sustainability and high-speed propulsion: Reacting flow modeling across molecular to continuum scales, *Department of Aeronautics and Astronautics, Massachusetts Institute of Technology*, April, 2024.

28. Enabling aerospace sustainability and high-speed propulsion: Reacting flow modeling across molecular to continuum scales, *Department of Mechanical Engineering, Michigan State University*, April, 2024.

27. Multiscale reacting flow: From *ab initio* molecular modeling to continuum flow physics, *Department of Aerospace Engineering, Texas A&M University*, March, 2024.

26. Enabling aerospace sustainability and high-speed propulsion: Reacting flow modeling across molecular to continuum scales, *Department of Mechanical Engineering, University of Maryland*, March, 2024.

25. **Invited:** Bridging the gap between first principles reaction discovery and continuum modeling, *ACS Spring 2024*, New Orleans, LA, March, 2024. [*Poster presentation as the winner of* ***Wiley Computers in Chemistry Outstanding Postdoc Award***]

24. Enabling sustainable aviation and high-speed propulsion: Reacting flow modeling across molecular to continuum scales, *School for Engineering of Matter, Transport and Energy, Arizona State University*, March, 2024.

23. Enabling aerospace sustainability and high-speed propulsion: Reacting flow modeling across molecular to continuum scales, *Department of Mechanical and Aerospace Engineering, North Carolina State University*, March, 2024.

22. Enabling sustainable propulsion and clean energy transitions: Reacting flow modeling across molecular to continuum scales, *Department of Mechanical and Industrial Engineering, University of Illinois Chicago*, February, 2024.

21. Enabling sustainable propulsion and clean energy transitions: Reacting flow modeling across molecular to continuum scales, *Department of Aerospace and Mechanical Engineering, University of Southern California*, January, 2024.

20. **Invited:** Multiscale first principles reaction discovery for methane pyrolysis, *Physical Chemistry Seminar, Department of Chemistry and Chemical Biology, Rutgers University*, November, 2023.

19. Application of the *ab initio* nanoreactor and the nonadiabatic *ab initio* molecular dynamics to polymer degradation, *BASF CARA Meeting*, Santa Barbara, CA, October, 2023.

18. Automatic first principles reaction discovery from *ab initio* molecular dynamics to chemical kinetics prediction for methane pyrolysis, *ACS Fall 2023*, San Francisco, CA, August, 2023.

17. Enabling sustainable aviation: Reacting flow modeling from molecular scale to device, *Department of Aeronautics and Astronautics, Massachusetts Institute of Technology*, March, 2023.

16. Integrating computational reaction discovery in the *ab initio* nanoreactor with kinetic modeling and sensitivity analysis, *2022 AICHE Annual Meeting*, Phoenix, AZ, November, 2022.

15. Computational reaction discovery in the *ab initio* nanoreactor integrated with kinetic modeling and sensitivity analysis, *ACTC* (*American Conference on Theoretical Chemistry*) *2022*, Palisades Tahoe, CA, July, 2022.[*Lightning talk video*]

14. Effect of pyrolysis product species measurement uncertainties on the prediction accuracy of HyChem reaction model – A case study on Jet A, *ACS Fall 2020 Virtual Meeting*, August, 2020.

13. **Invited:** HyChem approach to modeling real-fuel combustion chemistry: From ignition, flame propagation to emission predictions, *ACS Fall 2020 Virtual Meeting*, August, 2020.

12. Sensitivity of HyChem model accuracy to species measurement uncertainties of fuel pyrolysis, *11th U.S. National Meeting on Combustion*, Pasadena, CA, March, 2019.

11. Principle of large component number in multicomponent fuel combustion – a Monte Carlo study, *37th International Symposium on Combustion*, Dublin, Ireland, August, 2018.

10. **Invited:** Available HyChem models for major hydrocarbon fuels: JPs for aviation, RPs for space and gasoline for automotive applications, *11th MACCCR (Multi-Agency Coordinating Committee for Combustion Research) Annual Fuel and Combustion Research Review Meeting*, Sandia National Laboratories, Livermore, CA, April, 2018.

9. **Invited:** HyChem model details for Air Force real fuels: JP$_x$ and RP$_x$, *2017 AFOSR/ARO/NSF Basic Combustion Research Review Meeting*, Basic Research Innovation and Collaboration Center, Arlington, VA, June, 2017.

8. HyChem model: application to petroleum-derived jet fuels, *10th U.S. National Meeting on Combustion*, College Park, MD, April, 2017.

7. Evidence supporting a simplified approach to modeling high-temperature combustion chemistry, *10th U.S. National Meeting on Combustion*, College Park, MD, April, 2017.

6. Evidence supporting a simplified approach to modeling high-temperature combustion chemistry, *HTGL (High-Temperature Gasdynamics Laboratory) Seminar, Department of Mechanical Engineering, Stanford University*, April, 2017.

5. HyChem approach to combustion chemistry of jet fuels, *2017 TFSA (Thermal & Fluid Sciences Affiliates) and Sponsors Conference, Stanford University*, February, 2017.

4. A comparative study of combustion chemistry of conventional and alternative jet fuels with hybrid chemistry approach, *55th AIAA Aerospace Sciences Meeting*, Grapevine, TX, January, 2017.

3. HyChem approach to combustion chemistry of jet fuels, *HTGL Seminar, Department of Mechanical Engineering, Stanford University*, December, 2016.

2. HyChem model: A real fuel combustion chemistry approach, *Center for Combustion Energy, Tsinghua University*, Beijing, China, June, 2016.

1. A mixed toolpath strategy for improved geometric accuracy and higher throughput in double-sided incremental forming, *ASME Manufacturing Science and Engineering Conference*, Detroit, MI, June, 2014.

Teaching Experience

Martínez group subgroup leader/lecturer, Stanford University 2021 – 2024

- Excited state dynamics subgroup
  - Lecture series: ***Quantum and Classical Dynamics***
  - Topics: Introduction to time dependent Schrodinger equation; Density operator and Wigner

transformation; Erhenfest dynamics; Numerical integration and velocity verlet
- Nanoreactor and Machine learning subgroup
  - Lecture series: ***Reaction Kinetics and Rate Theory***
  - Topics: Gas phase collition theory; Transition state theory; Unimolecular reactions, Lindamann mechanism and Hinshelwood theory; RRKM theory
- Summer school lecturer
  - Lecture: ***Classical Dynamics and Symplectic Integrators***

Teaching Certificate, Stanford Scientific Teaching Summer Institute 2022

Guest lecturer, Stanford University 2019
- Course: ME 371 Combustion Fundamental (Guest lecture on real-fuel combustion chemistry)

Teaching Assistant, Stanford University 2018
- Course: ME 371 Combustion Fundamental (Problem sessions and two guest lectures)

Mentorship Experience

Garrett Kukier, Ph.D. candidate in Theoretical Chemistry, Stanford University 2023 – present
- Project: Computational study of dioxetane dissociation mechanochemistry

Soren Holm, Ph.D. in Theoretical Chemistry, Stanford University 2021 – 2024
- Thesis: The dynamics and mechanisms of molecular reactions under tension

Alexander M. Chang, Ph.D. in Theoretical Chemistry, Stanford University 2020 – 2024
- Thesis: Advancing automated reaction discovery through novel acceleration techniques for *ab initio* molecular dynamics

Nikolaos Kateris, Ph.D. in Mechanical Engineering, Stanford University 2018 – 2020
- Thesis: Alkali polysulfide phosphorus complexation batteries : a quantum chemistry electrochemical study

Kevin Wan, Ph.D. in Mechanical Engineering, Stanford University 2017 – 2020
- Thesis: Characterization of NO_x and soot in premixed stagnation flames

Yue Zhang, Ph.D. in Mechanical Engineering, Stanford University 2016 – 2022
- Thesis: Neural network assisted combustion chemistry reaction model optimization and uncertainty minimization

Service

Conference Session Chair/Presider
- Session Presider, ACS Fall 2023, COMP Division, Quantum Chemistry Session 2023
- Session Chair, Western States Section Combustion Meeting, Nanomaterials/Soot section 2020

Journal Reviewer
- Combustion and Flame; Proceedings of the Combustion Institute; Progress in Energy and Combustion Science; Applications in Energy and Combustion Science; Combustion Science and Technology; The Journal of Physical Chemistry; Journal of Chemical Theory and Computation; Fuel; Fuel Processing Technology; Energy; Applied Energy; International Journal of Hydrogen Energy; Case Studies in Thermal Engineering; Journal of the Energy Institute; International Journal of Environmental Research and Public Health

Conference Proceeding Reviewer

- International Symposium on Combustion, ASME Turbo Expo

Organizations
