Research Interests

My research aims to establish a new understanding on high-speed reacting flow physics, through designing multiscale approaches combining *ab initio* molecular modeling, chemical kinetics, and turbulent flow simulations. This multiscale platform will tackle three critical problems in high-speed reacting flows, including nonequilibrium physics, sustainable aviation fuels, and plasma chemistry.

Professional Appointments

Postdoctoral Scholar, Stanford University, Stanford, CA, USA 2020 – present
Department of Chemistry and the PULSE Institute Advisor: Todd J. Martínez

Postdoctoral Scholar, Stanford University, Stanford, CA, USA 2019 – 2020
Department of Mechanical Engineering Advisor: Hai Wang

Education

Stanford University, Stanford, CA, USA 2014 – 2019
Ph.D., Mechanical Engineering. GPA: 4.1/4.0 Advisor: Hai Wang
Thesis: HyChem – A physics-based approach to modeling real-fuel combustion chemistry [[Link](#)]

Northwestern University, Evanston, IL, USA 2012 – 2014
M.S., Mechanical Engineering. GPA: 4.0/4.0

Shanghai Jiao Tong University, Shanghai, China 2008 – 2012
B.S., Mechanical Engineering. GPA: 90.4/100.0, Rank: 1/87

Research Experience

Postdoctoral Scholar, Stanford University, Stanford, CA, USA 2020 – present
Department of Chemistry and the PULSE Institute Advisor: Todd J. Martínez

- [Research direction 1: Quantum chemistry reaction discovery for reacting flows](#)
 - Combining *ab initio* molecular dynamics with chemical kinetic modeling in the *ab initio* nanoreactor for fuel combustion, sustainable aviation fuel design, and emission prediction
 - Developing enhanced sampling approaches for efficient computational reaction discovery
 - Exploring non-equilibrium thermodynamics and plasma chemistry in the *ab initio* nanoreactor
- [Research direction 2: Multiscale modeling for energy harvesting materials](#)
 - Modeling photo- and mechanical-energy harvesting materials at multiscales
 - Exploring chemistry and mechanics interaction in stress-responsive materials.
 - Investigating photochemistry of diarylethene using nonadiabatic *ab initio* molecular dynamics.
- [Leadership](#): Leading monthly meetings and theory lectures of the nanoreactor/machine learning and the excited state dynamics subgroup with the approximate size of 15 people.

Postdoctoral Scholar, Stanford University, Stanford, CA, USA

2019 – 2020

Department of Mechanical Engineering

Advisor: Hai Wang

- **Research direction 1: Bridging reduced kinetic models with 3D turbulent modeling**
 - Developed an ultra-reduced methane combustion kinetic model for high-speed turbulent combustion modeling, including direct numerical simulation (DNS), large-eddy simulation (LES), and one-dimensional turbulence (ODT) modeling.
- **Research direction 2: Energy materials study using density functional theory (DFT)**
 - DFT study of sodium-sulfur battery electrochemistry in collaboration with experimentalists
 - Computational study of interactions between polycyclic aromatic hydrocarbons and metal ions

Graduate Research Assistant, Stanford University, Stanford, CA, USA

2014 – 2019

Department of Mechanical Engineering

Advisor: Hai Wang

- **Research direction: Physics-based combustion chemistry model for liquid propulsion fuel**
 - Developed and implemented a hybrid chemistry (HyChem) approach for combustion chemistry modeling of liquid propulsion and ground transportation fuels, including conventional jet fuels, sustainable aviation fuel, rocket propellants, and gasolines
 - Extended the HyChem approach emission modelings such as NO_x and soot (particulate matters)
 - Applied HyChem combustion chemistry models to LES under real engine operating conditions.

Honors and Awards

AFOSR Scholar Award , ACTC (American Conference on Theoretical Chemistry) 2022	2022
Combustion Institute Student Travel Award , 11 th U.S. National Meeting on Combustion	2019
NSF Student Award , 37 th International Symposium on Combustion	2018
Combustion Institute Student Travel Award , 10 th U.S. National Meeting on Combustion	2017
Graduation with highest distinction (Rank 1/87) , Shanghai Jiao Tong University	2012
National Scholarship , China Ministry of Education & Shanghai Jiao Tong University	2009

Invited Talks and Conference Presentations

19. Application of the *ab initio* nanoreactor and the nonadiabatic *ab initio* molecular dynamics to polymer degradation, *BASF California Alliance Meeting*, Santa Barbara, CA, October, 2023.
18. Automatic first principles reaction discovery from *ab initio* molecular dynamics to chemical kinetics prediction for methane pyrolysis, *ACS Fall 2023 Meeting & Expo*, San Francisco, CA, August, 2023.
17. Enabling sustainable aviation: Reacting flow modeling from molecular scale to device, *Department of Aeronautics and Astronautics, Massachusetts Institute of Technology*, March, 2023.
16. Integrating computational reaction discovery in the *ab initio* nanoreactor with kinetic modeling and sensitivity analysis, *2022 AIChE Annual Meeting*, Phoenix, AZ, November, 2022.
15. Computational reaction discovery in the *ab initio* nanoreactor integrated with kinetic modeling and sensitivity analysis, *ACTC (American Conference on Theoretical Chemistry) 2022*, Palisades Tahoe, CA, July, 2022.[[Lightning talk video](#)]

14. Effect of pyrolysis product species measurement uncertainties on the prediction accuracy of HyChem (hybrid chemistry) reaction model – A case study on Jet A, *ACS Fall 2020 Virtual Meeting & Expo*, August, 2020.
13. **Invited:** HyChem (hybrid chemistry) approach to modeling real-fuel combustion chemistry: From ignition, flame propagation to emission predictions, *ACS Fall 2020 Virtual Meeting & Expo*, August, 2020.
12. Sensitivity of HyChem model accuracy to species measurement uncertainties of fuel pyrolysis, *11th U.S. National Meeting on Combustion*, Pasadena, CA, March, 2019.
11. Principle of large component number in multicomponent fuel combustion – a Monte Carlo study, *37th International Symposium on Combustion*, Dublin, Ireland, August, 2018.
10. **Invited:** Available HyChem models for major hydrocarbon fuels: JPs for aviation, RPs for space and gasoline for automotive applications, *11th MACCCR (Multi-Agency Coordinating Committee for Combustion Research) Annual Fuel and Combustion Research Review Meeting*, Sandia National Laboratories, Livermore, CA, April, 2018.
9. **Invited:** HyChem model details for Air Force real fuels: JP_x and RP_x, *2017 AFOSR/ARO/NSF Basic Combustion Research Review Meeting*, Basic Research Innovation and Collaboration Center, Arlington, VA, June, 2017.
8. HyChem model: application to petroleum-derived jet fuels, *10th U.S. National Meeting on Combustion*, College Park, MD, April, 2017.
7. Evidence supporting a simplified approach to modeling high-temperature combustion chemistry, *10th U.S. National Meeting on Combustion*, College Park, MD, April, 2017.
6. Evidence supporting a simplified approach to modeling high-temperature combustion chemistry, *HTGL (High-Temperature Gasdynamics Laboratory) Seminar, Department of Mechanical Engineering, Stanford University*, April, 2017.
5. HyChem approach to combustion chemistry of jet fuels, *2017 TFSA (Thermal & Fluid Sciences Affiliates) and Sponsors Conference, Stanford University*, February, 2017.
4. A comparative study of combustion chemistry of conventional and alternative jet fuels with hybrid chemistry approach, *55th AIAA Aerospace Sciences Meeting*, Grapevine, TX, January, 2017.
3. HyChem approach to combustion chemistry of jet fuels, *HTGL Seminar, Department of Mechanical Engineering, Stanford University*, December, 2016.
2. HyChem model: A real fuel combustion chemistry approach, *Center for Combustion Energy, Tsinghua University, Beijing, China*, June, 2016.
1. A mixed toolpath strategy for improved geometric accuracy and higher throughput in double-sided incremental forming, *ASME Manufacturing Science and Engineering Conference*, Detroit, MI, June, 2014.

Contributed Grants

AFOSR DURIP Award, PI: Hai Wang 2020

- Proposal: Advanced diagnostics for detonation waves in small tubes and nano carbon formation at high pressures
- Contributions: Assisted with preliminary data generation, figure production, and text writing

AFOSR Grant, PI: Hai Wang 2019

- Proposal: Sensitizing reaction chemistry in detonation
- Contributions: Assisted with preliminary data generation, figure production, and text writing

Teaching Experience

Teaching Certificate, Stanford University 2022

- Stanford Scientific Teaching Summer Institute

Martínez group subgroup leader/lecturer, Stanford University 2022 – present

- Excited state dynamics subgroup (Sept. 2022 – present)
 - Offering a lecture series on *quantum and classical dynamics*
 - Courses offered so far: Introduction to time dependent Schrodinger equation; Density operator and Wigner transformation; Erhenfest dynamics; Numerical integration and velocity verlet
- Nanoreactor and Machine learning subgroup (Sept. 2021 – Sept. 2022)
 - Offered a lecture series on *reaction kinetics and rate theory*
 - Courses offered: Gas phase collision theory; Transition state theory; Unimolecular reactions, Lindamann mechanism and Hinshelwood theory; RRKM theory

Martínez group summer school lecturer, Stanford University 2021

- Course offered: *Claisscal Dynamics and Symplectic Integrators*

Guest lecturer, Stanford University 2019

- Course: **ME 371: Combustion Fundamental**
- Offered a guest lecture on real-fuel combustion chemistry

Teaching Assistant, Stanford University 2018

- Course: **ME 371: Combustion Fundamental**
- Held bi-weekly problem sessions and two 50-minute guest lectures

Mentorship Experience

Alexander M. Chang, Ph.D. Candidate in Chemistry, Stanford University 2020 – present

- Automated reaction discovery in the *ab initio* nanoreactor

Soren Holm, Ph.D. Candidate in Chemistry, Stanford University 2020 – present

- Multiscale modeling of stress-responsive materials from first principles

Ethan Curtis, Ph.D. Candidate in Chemistry, Stanford University 2020 – present

- Computational study of photomechanical switch molecules

Nicholas Gloria, M.S. in Aeronautics and Astronautics, Stanford University 2019

- Modeling equilibrium chemistry in rocket expansion external flows

Nikolaos Kateris, Ph.D. Candidate in Mechanical Engineering, Stanford University 2018 – 2020

- Computational study of interactions between polycyclic aromatic hydrocarbons and metal ions

Kevin Wan, Ph.D. in Mechanical Engineering, Stanford University 2017 – 2020

- Experimental and numerical study of NO_x and soot emission from jet fuels

Yue Zhang, Ph.D. in Mechanical Engineering, Stanford University 2016 – 2020

- Modeling combustion chemistry of foundational fuels using machine learning approaches
- DFT study on electrochemistry of sodium-sulfur battery in collaboration with experimentalists

Service

Conference Session Chair/Presider

- Session Presider, ACS Fall 2023, COMP Division, Quantum Chemistry Session 2023
- Session Chair, Western States Section Combustion Meeting, Nanomaterials/Soot section 2020

Journal Reviewer

- Applications in Energy and Combustion Science; Combustion and flame; Combustion Science and Technology; Energy; Fire; Fuel; Fuel Processing Technology; International Journal of Environmental Research and Public Health; International Journal of Hydrogen Energy; The Journal of Physical Chemistry; Proceedings of the Combustion Institute; Progress in Energy and Combustion Science

Conference Proceeding Reviewer

- ASME Turbo Expo

Organizations

- AIAA; ASME; The Combustion Institute; ACS (COMP & ENFL); AIChE (COMSEF)
